Description

Description

The IBS parts cleaning machine type M-500 was specially developed for manual brush cleaning of parts contaminated with oil and grease using cold cleaning agents (petroleum-based hydrocarbon mixtures).

This heavy-duty version (industrial version), with an ergonomic workbench height (870 mm), is characterised by its large work surface (1135 x 660 mm) and very high load capacity of up to 500 kg. This makes this brush washbasin ideal for cleaning large and very heavy parts.

The sturdy powder-coated sheet steel construction and the robust galvanised slatted grating guarantee a long service life, while the lower drain and the sloping drain ensure that everything flows back into the bowl and the cleaner cannot overflow.

The convenient and safe foot switch technology is user-friendly and easy to operate.

The unique IBS special pump is the centrepiece of the IBS parts cleaners and is designed for use in IBS parts cleaners. The pump is self-priming, unpressurised and absolutely trouble-free and maintenance-free.

The complete IBS pump set type M/MD is included in the scope of delivery
